EDUCATION

computer information system Yarmouk University

10/2020 - 06/2024

WORK EXPERIENCE

Intern Full Stack Developer AppTrainers

12/2024 - Present

Amman, Jordan

Achievements/Tasks

- Developed a Food Delivery Management System for a single restaurant using ASP.NET Core Web API, Entity Framework, ADO.NET, and SQL Server
- Built the database using both Code-First and Database-First approaches in SQL Server to support flexible development and integration
- Collaborated with the Flutter mobile team to integrate APIs for user registration, menu browsing, order placement, and delivery tracking
- Implemented secure login, role-based access, real-time order status updates, and payment handling
- Built and maintained backend logic for order management, offer handling, and delivery assignment
- Worked in an Agile development environment using Git and GitHub for version control and collaboration
- Tested and debugged backend services to ensure seamless API performance and system stability

PROJECTS

Solar Energy System (03/2024 - 06/2024)

- Developed a comprehensive Backoffice system to enhance communication between managers and technicians within a solar energy company. The system calculates the required number of solar cells for users based on their last three electricity bills and facilitates various administrative tasks

FoodTec (03/2025 - Present)

- Developed a mobile-based Food Delivery Management System for a single restaurant, featuring user registration/login, menu browsing, offers display, secure ordering and payment, real-time order status, and live delivery tracking.

Computergy (04/2025 - Present)

- Developed the backend of an e-commerce platform for selling computer components using ASP.NET Core and Entity Framework Core (Code First). Designed and implemented scalable RESTful APIs, integrated authentication and authorization, and ensured efficient database interactions and data integrity.

Password Manager (05/2025 - Present)

- Developed the backend of a secure password management platform using ASP.NET Core Web API. Implemented robust authentication, encrypted password storage, and password generation logic. Utilized Entity Framework Core (Code First) for database design and secure data handling.
